

Year 4 Mathematics

How to support your child at home

We have been really impressed by the number of parents who have been taking an interest in supporting their child with their mathematics learning at home. This year, we have changed the way we teach Mathematics to really focus on reasoning and problem solving. To teach mathematical fluency, we are now using a CPA (Concrete, Pictorial, Abstract) approach. This is shown in the calculation strategies outlined in this document. Understandably, it is really important the strategies used at home are the same as the strategies we are using in school.

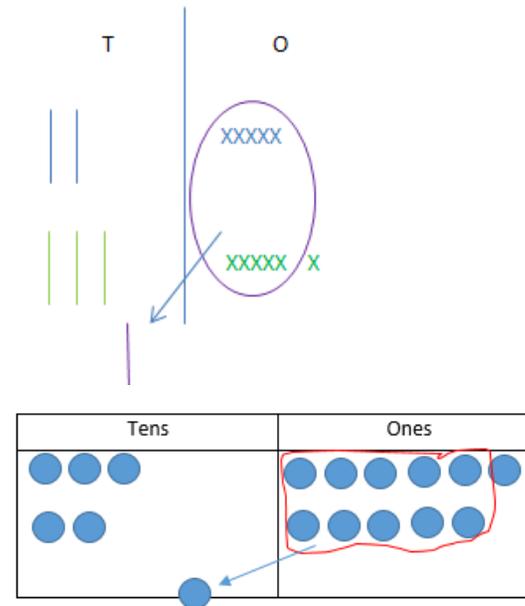

Addition-

Key language which should be used: *sum, total, parts and wholes, plus, add, altogether, more than, 'is equal to' 'is the same as'*

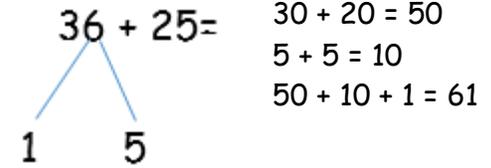

TO + TO using base 10. Continue to develop understanding of partitioning and place value and use this to support addition. Begin with no exchanging. $36 + 25$

	Tens	Ones
+		
=		

This could be done one of two ways:

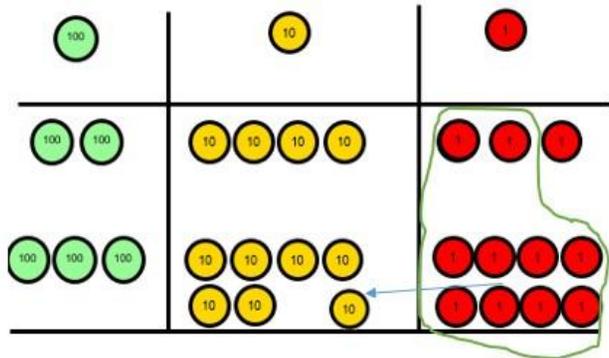

Looking for ways to make 10

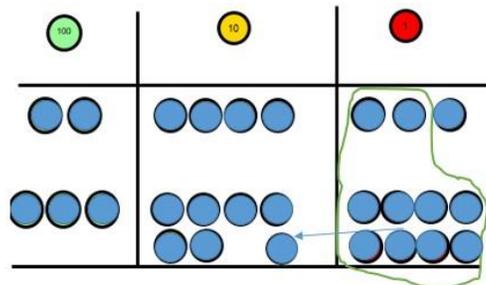

Formal method:

$$\begin{array}{r}
 36 \\
 +25 \\
 \hline
 61 \\
 \hline
 1
 \end{array}$$

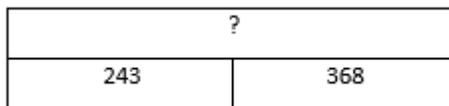

Use of place value counters to add HTO + TO, HTO + HTO etc. once the children have had practice with this, they should be able to apply it to larger numbers and the abstract

Children to represent the counters e.g. like the image below

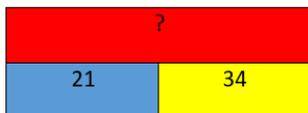

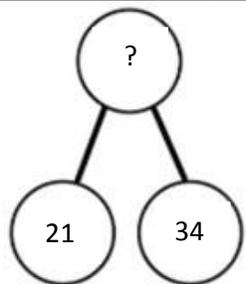

If the children are completing a word problem, draw a bar model to represent what it's asking them to do

$$\begin{array}{r} 243 \\ +368 \\ \hline 611 \\ \hline 11 \end{array}$$

Fluency variation, different ways to ask children to solve 21+34:

Sam saved £21 one week and £34 another. How much did he save in total?

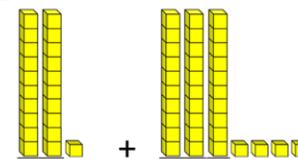

$21+34=55$. Prove it! (reasoning but the children need to be fluent in representing this)

$$\begin{array}{r} 21 \\ +34 \\ \hline \end{array}$$

$$21 + 34 =$$

$$\boxed{} = 21 + 34$$

What's the sum of twenty one and thirty four?

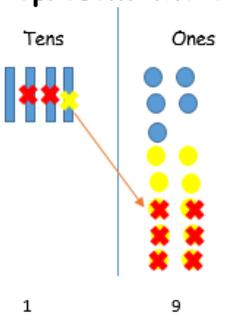

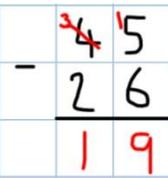

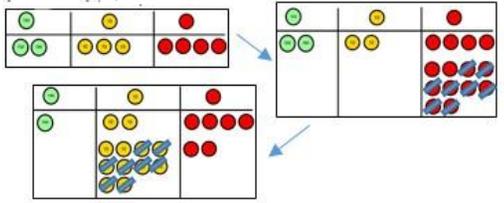

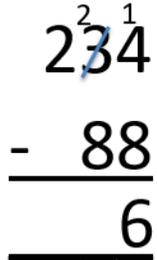

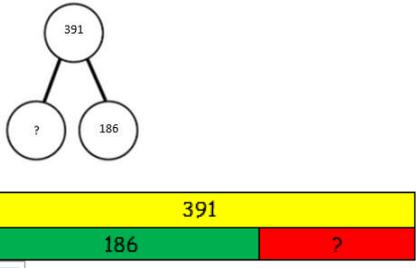

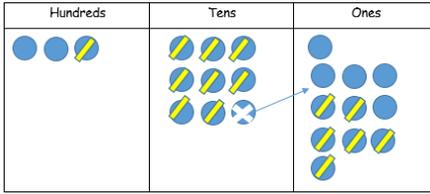

Always use missing digit problems too:

Tens	Ones
	?
?	4

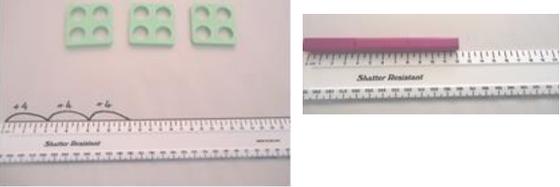

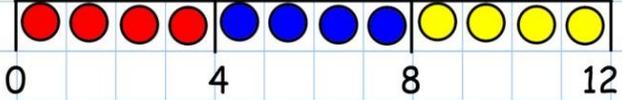

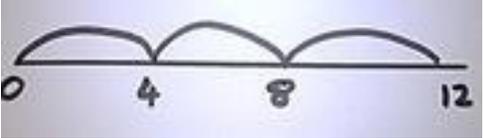

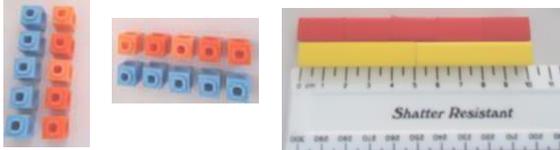

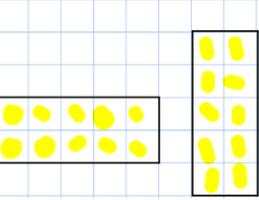

Subtraction-

Key language which should be used: take away, less than, the difference, subtract, minus, fewer, decrease, '7 take away 3, the difference is four'

<p>Column method (using base 10 and having to exchange)</p> <p>45-26</p>  <ol style="list-style-type: none"> 1) Start by partitioning 45 2) Exchange one ten for ten more ones 3) Subtract the ones, then the tens. 	<p>Represent the base 10 pictorially</p> 	<p>It's crucial that the children understand that when they have exchanged the 10 they still have 45. $45 = 30 + 15$</p> 	
<p>Column method (using place value counters) 234-88</p> 	<p>Once the children have had practice with the concrete, they should be able to apply it to any subtraction.</p> <p>Like the other pictorial representations, children to represent the counters.</p>		
<p>Fluency variation, different ways to ask children to solve 391-186:</p>			
	<p>Raj spent £391, Timmy spent £186. How much more did Raj spend?</p> <p>I had 391 metres to run. After 186 I stopped. How many metres do I have left to run?</p>	<p>$391 - 186$</p> <p>$= 391 - 186$</p> $\begin{array}{r} 391 \\ -186 \\ \hline \end{array}$ <p>Find the difference between 391 and 186</p> <p>Subtract 186 from 391.</p> <p>What is 186 less than 391?</p>	<p>What's the calculation? What's the answer?</p>  $\begin{array}{r} 39\ \square \\ -\ \square\square\ 6 \\ \hline \square\ 0\ 5 \end{array}$

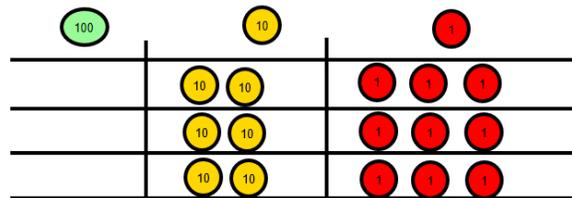

Multiplication-

Key language which should be used: double times, multiplied by, the product of, groups of, lots of, 'is equal to' 'is the same as'

Concrete	Pictorial	Abstract
<p>Repeated grouping/repeated addition (does not have to be restricted to cubes) 3 x 4 or 3 lots of 4</p> 	<p>Children to represent the practical resources in a picture e.g.</p> <p>XX XX XX XX XX XX</p> <p>Use of a bar model for a more structured method</p> 	<p>3×4</p> <p>$4 + 4 + 4$</p>
<p>Use number lines to show repeated groups- 3 x 4</p> 	<p>Represent this pictorially alongside a number line e.g:</p> 	<p>Abstract number line</p> <p>$3 \times 4 = 12$</p> 
<p>Use arrays to illustrate commutativity (counters and other objects can also be used) $2 \times 5 = 5 \times 2$</p> 	<p>Children to draw the arrays</p> 	<p>Children to be able to use an array to write a range of calculations e.g.</p> <p>$2 \times 5 = 10$ $5 \times 2 = 10$ $2 + 2 + 2 + 2 + 2 = 10$ $5 + 5 = 10$</p>

Formal column method with place value counters or base 10 (at the first stage- no exchanging) 3×23

Make 23, 3 times. See how many ones, then how many tens

Children to represent the counters in a pictorial way

Children to record what it is they are doing to show understanding

$$3 \times 23 \quad 3 \times 20 = 60$$

$$20 \quad 3 \quad 3 \times 3 = 9$$

$$60 + 9 = 69$$

$$\begin{array}{r} 23 \\ \times 3 \\ \hline 69 \end{array}$$

Formal column method with place value counters (children need this stage, initially, to understand how the column method works)

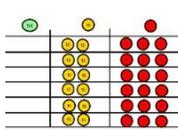

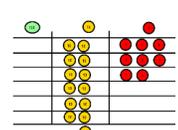

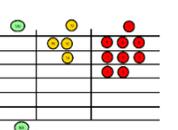

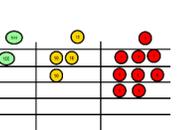

Children to represent the counters/base 10, pictorially e.g. the image below.

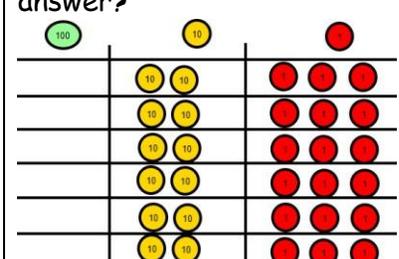

$$6 \times 23$$

$$6 \times 3 = 18$$

$$6 \times 20 = 120$$

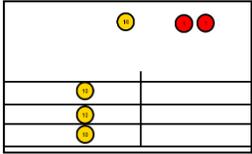

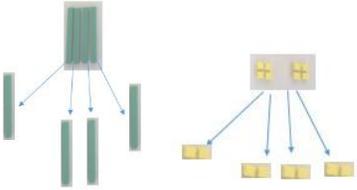

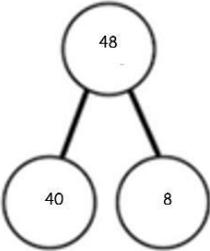

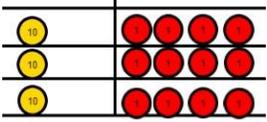

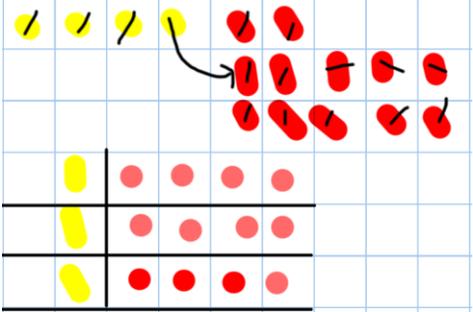

$$120 + 18 = 138$$

<p>6×23</p>  <p>Step 1: get 6 lots of 23</p>  <p>Step 2: 6×3 is 18. Can I make an exchange? Yes! Ten ones for one ten....</p>  <p>Step 3: 6×2 tens and my extra ten is 13 tens. Can I make an exchange? Yes! Ten tens for one hundred...</p>  <p>Step 4- what do I have I each column?</p>	<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <tr> <td style="width: 33%;">Hundreds</td> <td style="width: 33%;">Tens</td> <td style="width: 33%;">Ones</td> </tr> <tr> <td style="text-align: left;">/</td> <td style="text-align: left;">/</td> <td style="text-align: left;">/</td> </tr> <tr> <td style="border: none;">1</td> <td style="border: none;">3</td> <td style="border: none;">8</td> </tr> </table>	Hundreds	Tens	Ones	/	/	/	1	3	8	<p>The aim is to get to the formal method but the children need to understand how it works.</p> $ \begin{array}{r} 6 \times 23 = \\ 23 \\ \times 6 \\ \hline 138 \\ \hline 1 \quad 1 \end{array} $
Hundreds	Tens	Ones									
/	/	/									
1	3	8									

Fluency variation, different ways to ask children to solve 6×23:															
<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <tr> <td style="width: 16.6%;">23</td> </tr> <tr> <td colspan="6" style="border: none; text-align: center;">?</td> </tr> </table> <p>With the counters, prove that $6 \times 23 = 138$</p> <p>Why is $6 \times 23 = 32 \times 6$?</p>	23	23	23	23	23	23	?						<p>Mai had to swim 23 lengths, 6 times a week. How many lengths did she swim in one week?</p> <p>Tom saved 23p three days a week. How much did he save in 2 weeks?</p>	<p>Find the product of 6 and 23</p> <p>$6 \times 23 =$</p> $ \begin{array}{r} = 6 \times 23 \\ 6 \quad 23 \\ \times 23 \quad \times 6 \\ \hline \quad \hline \end{array} $	<p>What's the calculation? What's the answer?</p> 
23	23	23	23	23	23										
?															

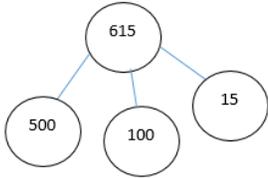

Division-

Key language which should be used: share, group, divide, divided by, half, 'is equal to' 'is the same as'

Concrete	Pictorial	Abstract
<p>2d divided by 1d using base 10 (no remainders) SHARING</p> <p>$48 \div 4 = 12$</p> <p>Start with the tens.</p> 	<p>Children to represent the base 10 and sharing pictorially.</p> 	<p>$48 \div 4$</p>  <p>4 tens \div 4 = 1 ten 8 ones \div 4 = 2 ones</p> <p>$10 + 2 = 12$</p>
<p>Sharing using place value counters.</p> <p>$42 \div 3 = 14$</p>  <p>1. Make 42. Share the 4 tens between 3. Can we make an exchange with the extra 10? Exchange the ten for 10 ones and share out the 12 ones.</p>	 <p>Exchange the ten for 10 ones and share out 12 ones</p>	<p>$42 \div 3$</p> <p>$42 = 30 + 12$</p> <p>$30 \div 3 = 10$</p> <p>$12 \div 3 = 4$</p> <p>$10 + 4 = 14$</p>

Fluency variation, different ways to ask children to solve $615 \div 5$:

Using the part whole model below, how can you divide 615 by 5 without using the 'bus stop' method?

I have £615 and share it equally between 5 bank accounts. How much will be in each account?

615 pupils need to be put into 5 groups. How many will be in each group?

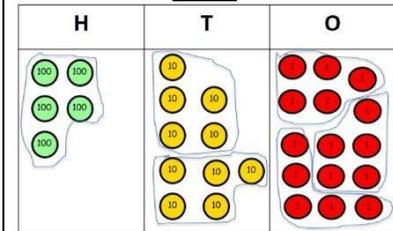

$$5 \overline{)615}$$

$$615 \div 5 =$$

$$= 615 \div 5$$

How many 5's go into 615?

What's the calculation? What's the answer?

Year 4 Age-Related Expectations

Number and Place Value

- count in multiples of 6, 7, 9, 25 and 1,000
- find 1,000 more or less than a given number
- count backwards through 0 to include negative numbers
- recognise the place value of each digit in a four-digit number (1,000s, 100s, 10s, and 1s)
- order and compare numbers beyond 1,000
- identify, represent and estimate numbers using different representations
- round any number to the nearest 10, 100 or 1,000
- solve number and practical problems that involve all of the above and with increasingly large positive numbers
- read Roman numerals to 100 (I to C) and know that over time, the numeral system changed to include the concept of 0 and place value

Addition and Subtraction

- add and subtract numbers with up to 4 digits using the formal written methods of columnar addition and subtraction where appropriate
- estimate and use inverse operations to check answers to a calculation
- solve addition and subtraction two-step problems in contexts, deciding which operations and methods to use and why

Multiplication and Division

- recall multiplication and division facts for multiplication tables up to 12×12
- use place value, known and derived facts to multiply and divide mentally, including: multiplying by 0 and 1; dividing by 1; multiplying together 3 numbers
- recognise and use factor pairs and commutativity in mental calculations
- multiply two-digit and three-digit numbers by a one-digit number using formal written layout
- solve problems involving multiplying and adding, including using the distributive law to multiply two-digit numbers by 1 digit, integer scaling problems and harder correspondence problems such as n objects are connected to m objects

Fractions (including decimals)

- recognise and show, using diagrams, families of common equivalent fractions
- count up and down in hundredths; recognise that hundredths arise when dividing an object by 100 and dividing tenths by 10
- solve problems involving increasingly harder fractions to calculate quantities, and fractions to divide quantities, including non-unit fractions where the answer is a whole number
- add and subtract fractions with the same denominator
- recognise and write decimal equivalents of any number of tenths or hundreds
- recognise and write decimal equivalents to $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$
- find the effect of dividing a one- or two-digit number by 10 and 100, identifying the value of the digits in the answer as ones, tenths and hundredths
- round decimals with 1 decimal place to the nearest whole number
- compare numbers with the same number of decimal places up to 2 decimal places
- solve simple measure and money problems involving fractions and decimals to 2 decimal places

Measurement

- convert between different units of measure [for example, kilometre to metre; hour to minute]
- measure and calculate the perimeter of a rectilinear figure (including squares) in centimetres and metres
- find the area of rectilinear shapes by counting squares
- estimate, compare and calculate different measures, including money in pounds and pence
- read, write and convert time between analogue and digital 12- and 24-hour clocks
- solve problems involving converting from hours to minutes, minutes to seconds, years to months, weeks to days

Geometry - Properties of Shapes

- compare and classify geometric shapes, including quadrilaterals and triangles, based on their properties and sizes
- identify acute and obtuse angles and compare and order angles up to 2 right angles by size
- identify lines of symmetry in 2-D shapes presented in different orientations
- complete a simple symmetric figure with respect to a specific line of symmetry

Geometry - Position and Direction

- describe positions on a 2-D grid as coordinates in the first quadrant
- describe movements between positions as translations of a given unit to the left/right and up/down
- plot specified points and draw sides to complete a given polygon

Statistics

- interpret and present discrete and continuous data using appropriate graphical methods, including bar charts and time graphs
- solve comparison, sum and difference problems using information presented in bar charts, pictograms, tables and other graphs
